SUMMARY

Final-year B.Sc. Electrical & Electronics Engineering student at Afeka (expected 2027) seeking a **hardware engineering internship**. Built and debugged a digital system on physical FPGA hardware, integrating a microcontroller over UART with real-time video output, and verified digital designs through RTL simulation and testbenches. Also brings nearly four years of practical experience troubleshooting live satellite communication systems.

EDUCATION

- **B.Sc. Electrical & Electronics Engineering** — Expected 2027
  Afeka Tel Aviv Academic College of Engineering · Specializations: Computers & Communications
- **Practical Engineer Diploma, Electrical Engineering** — 2022
  Handessaim Tel Aviv · Graduated with honors

HANDS-ON HARDWARE PROJECTS

- **Cyber Gladiators** – Independent FPGA Project — 2026
  VHDL · Xilinx Vivado · Basys 3 (Artix-7) · ESP32 · UART · VGA
  - Designed a modular **VHDL system** with 640 × 480 VGA output, sprite rendering, FSM-based control, collision detection and game logic.
  - **Integrated an ESP32 microcontroller over UART** and debugged the UART-to-VGA data path on physical hardware.
  - Verified RTL modules in simulation, synthesized and implemented the design in Vivado, and **demonstrated the full system on a Basys 3 board**.
- **RGB Median Filter** – Afeka Team Project — 2026
  VHDL · FSM · RAM/ROM · RTL Simulation · Testbenches
  - Developed **VHDL components** and integrated FSM control, data buffers and RAM/ROM handling for a 3 × 3 RGB median filter.
  - Verified module- and top-level behavior through **RTL simulation and testbenches** using image test data.

EXPERIENCE

- **Technical Support Engineer** — Dec 2022 – Present
  AMOS-Spacecom · Satellite Operator
  - Troubleshoot **15–25 technical incidents per week** on live satellite communication systems, using RF spectrum measurements, modem indicators and link performance data to isolate faults.
  - Remotely support VSAT systems and approximately **10–15 CPI** and **10–15 commissioning activities** per month, coordinating with customers and engineering teams.
  - Develop and refine **technical SOPs** that improve troubleshooting consistency and make critical procedures easier to find.

TECHNICAL SKILLS

Digital Design
VHDL, FSM design, RTL simulation, testbenches

Hardware & Debugging
FPGA (Artix-7 / Basys 3), ESP32, UART, VGA, on-board debugging

Tools
Xilinx Vivado; spectrum analyzer (professional); MATLAB/Simulink (academic)

Programming
C, Python (academic)

Systems Troubleshooting
Fault isolation, RF spectrum measurements, link diagnostics, technical SOPs

RELEVANT COURSEWORK

Advanced Hardware Design, Digital Signal Processing, Signals & Systems, Communication Systems

LANGUAGES

Hebrew – Native
English – Professional working proficiency
